

AUGUST is:

Each August, National Immunization Awareness Month provides an opportunity to highlight the need for improving national immunization coverage levels.

Vaccinations are important for people of all ages: babies, young children, school-aged children, preteens and teens, adults, and senior citizens. Vaccinations aren't just for children. To stay protected against diseases such as the flu, measles, and pneumonia, adults need to get their shots, too.

Check out the links below for immunization information and toolkits.
